Python
AWS Cloud
Backend
Frontend

BIRTHDAY
2003-05-27

NATIONALITY
Swedish

WORK EXPERIENCE

WAREHOUSE - H&M | apr 2022 - sep 2022

• I Worked part-time at H&M and completed four different training programs where i learned to handle returns, work with split point and perform picking and packing tasks.

PALLET REPAIRER & MACHINE OPERATOR - Ardagh Group | maj 2021 - sep 2021

• I have extensive experience working as a pallet repairer and machine operator at Ardagh Glass in Limmared. As part of my duties, I completed a traverser training program at Ardagh Group.

FULLSTACK-DEV - NFK / Woltuse | mar 2024 - jun 2024

• During my time at NFK, I worked in a startup company where, as part of a small team, we used the Scrum methodology to develop a React-based website for the company Woltuse.
• Our work primarily focused on React, using environment (env) files, and API integrations to ensure a smooth and efficient user experience.

PROJCTS

IOS-Developing – Swift, REST API, CoreData, UI/UX

Developed an iOS application in Swift targeted at football enthusiasts. Implemented features for league tables, goal statistics, real-time updates, and an integrated betting system. Responsible for API integration, optimized data management with CoreData, and a modern UI/UX design ensuring high performance and scalability.

Android-Developing – Kotlin, Firebase, Realtime Database

Designed and implemented a multiplayer online game in Kotlin, based on the Connect Four concept. Built real-time gameplay using Firebase Realtime Database, including synchronization of game data between users. Developed both game mechanics and network communication, with a focus on responsive design and user-friendliness.

Webdev Fullstack – React, TypeScript, AWS Cloud, Node.js, REST API

Built a full-stack web application that enabled uploading of videos and images to AWS S3 for secure cloud storage and management. Implemented backend logic in Node.js, focusing on REST API integrations and authentication. Developed the frontend in React and TypeScript with a modern and responsive design. The project also included work with CI/CD pipelines and version control using Git/GitHub.

EDUCATION

Software Development & Mobile Platforms
Jönköping University College, Jönköping 2022-2025
